

3D Carving Caliper

Ref. #:3D-C800

Product sheet

Industriepark, 11 | B-8730 Beernem | Belgium | T + 32 (0)50 78 17 94 | F +32 (0)50 78 19 64 | www.wivamac.com | info@willyvanhoutte.be

The WIVAMAC[®] 3D Carving Caliper has been created for stone sculptures and woodcarvers to make one-to-one copies of existing sculptures and to reproduce models made of plaster, modelling clay or modelling wax in materials like stone or wood. It drastically reduces measuring time and making irreparable mistakes.

The 3D-C800 can handle sculptures up till 800mm tall and 400mm wide/deep.

The pointing rod easily slides in its support. The sliding resistance can be set by means of a small Allan key. It has a stopping ring that can be locked on the rod.

The caliper is mainly made of Aluminum. It is very light to manipulate and to hang on the original sculpture or new block without damaging it.

One can easily access the back of the sculpture without changing the basic position of the calliper
