Your health – OUR CONCERN!

WIVAMAC[®] lathes are not only built to grow with your skills and expertise but also take into consideration your restrictions.

Whether, you prefer not to stand long hours behind your lathe, whether you have backache or are disabled, being able to sit down makes it possible for you to continue practising your favourite Woodturning hobby.

Therefore WIVAMAC[®] has created this innovative sit down conversion kit. It allows you to convert your standard WIVAMAC[®] lathe into a sit down version. You can use it sitting in an normal- or a wheelchair.

The kit fits on the entire range of WIVAMAC[®] lathes, built since 2003.

Later, if you want to sell or give away your lathe, it can be converted again into the standard standing configuration without any problem.

If you do lots of spindle turning, you may want to add a bed extension to keep the original centre distance.
