

Woodturners Carving Clamp

Ref. #:DB1501, DB1502 & DB1503

Product sheet

Industriepark, 11 | B-8730 Beernem | Belgium | T + 32 (0)50 78 17 94 | F +32 (0)50 78 19 64 | www.wivamac.com | info@willyvanhoutte.be

The WIVAMAC[®] woodturners clamp with double swivel locking system and omnidirectional articulation provides full access with single lever operation to a pretuned workpiece, without taking it out of the chuck.

By being able to keep the workpiece in the chuck one can put it back on the lathe for further decoration and/or finishing. It will be perfectly centred as it originally was without the risk of wobbling.

After unlocking the device by simple loosening the handle, one can position the workpiece easily in any required position and lock it again.

The handle has a position setting system to enable reorient it to the best ergonomical working position for the turner/carver, minimising effort and maximising ease of use.

The WIVAMAC[®] woodturners clamp is foreseen with a M33 x 3,5mm chuck interface for mounting the chuck on the DB1501. The DB1502 has an 1" x 8TPI interface. They both have a 1" shaft to fit into a 1" toolrest holder. The DB1503 has the M33 x 3,5mm chuck interface with a 30mm shaft.
